

THE 16 HABITS OF SUCCESS

Based on the Building Blocks for Learning Framework. Stafford-Brizard, K. B. (2016). Turnaround for Children.

Academic Tenacity: The beliefs and skills that allow students to look beyond short-term concerns to longer-term or higher-order goals, and withstand challenges and setbacks to persevere toward these goals.¹

Agency: A student's individual decision-making and autonomous actions.²

Attachment: A deep and enduring emotional bond that connects one person to another across time and space.³

Curiosity: The desire to engage and understand the world, interest in a wide variety of things and preference for a complete understanding of a complex topic or problem.⁴

Empathy: The ability to take the perspective of, and empathize with, others from diverse backgrounds and cultures, to understand social and ethical norms for behavior, and to recognize family, school and community resources and supports.⁵

Relationship Skills: The ability to establish and maintain healthy and rewarding relationships with diverse individuals and groups. This includes communicating clearly, listening actively, cooperating,

resisting inappropriate social pressure, negotiating conflict constructively and seeking and offering help when needed.⁶

Executive Functions: The cognitive control functions needed when one has to concentrate and think, when acting on one's initial impulse would be ill-advised. Core executive functions include cognitive flexibility, inhibition (self-control, self-regulation) and working memory. More complex executive functions include problem-solving, reasoning and planning.⁷

Growth Mindset: Wherein students ascribe to the belief: my ability and competence grow with my effort.⁸

Purpose: A student's understanding of their interests, values, and skills, and the articulation of a credible path after high school for translating those interests, values, and skills into fulfilled lives.

Relevance of School: A student's sense that the subject matter he or she is studying is interesting and holds value.⁹

Resilience: Positive adaptation during or following exposure to adversities that have the potential to harm development: (a) developing well in the context of high cumulative risk for developmental problems (beating the odds, better than predicted development), (b) functioning well under currently-adverse conditions (stress-resistance, coping) and (c) recovery to normal functioning after catastrophic adversity (bouncing back, self-righting) or severe deprivation (normalization).¹⁰

Self-Regulation: Regulation of attention, emotion and executive functions for the purposes of goal-directed actions.¹¹

Self-Awareness: The ability to accurately recognize one's emotions and thoughts and their influence on behavior. This includes accurately assessing one's strengths and limitations and possessing a well-grounded sense of confidence and optimism.¹²

Stress Management: Constantly changing cognitive and behavioral efforts to manage specific external and/or internal demands that are appraised as taxing or exceeding the resources of the person.¹³

Self-Direction: A process in which learners take the initiative in planning, implementing and evaluating their own learning needs and outcomes, with or without the help of others.¹⁴

Self-Efficacy: The perception that one can do something successfully.¹⁵
